Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Bobby is tasked with processing a sequence of numbers from a monitoring system. He needs to extract a strictly increasing subsequence using an ArrayList. The program should dynamically add numbers to the ArrayList only if they are greater than the last number currently stored in the list. Bobby aims to efficiently utilize the dynamic resizing and indexing features of the ArrayList to solve this problem.

Help Bobby implement this solution.

Input Format

The first line of input consists of an integer N, representing the number of elements.

The second line consists of N space-separated integers, representing the elements.

Output Format

The output prints the list of integers in increasing sequence, ignoring out-of-order elements.

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 7
3 5 9 1 11 7 13
Output: [3, 5, 9, 11, 13]

Answer

```
import java.util.*;  
  
public class Main{  
    public static void main(String[] args){  
        Scanner scanner=new Scanner(System.in);  
  
        int n=scanner.nextInt();  
  
        //create an array list of integers  
        ArrayList<Integer> list=new ArrayList<>();  
  
        //the name of the array list is "list"  
  
        for(int i=0;i<n;i++){  
            int num=scanner.nextInt(); //taking array elements as input  
  
            /* if num is the first element, or if num is greater than the last element in  
            the list then  
            include num to the list*/  
  
            if(list.isEmpty() || num>list.get(list.size()-1)){  
                list.add(num);  
            }  
        }  
    }  
}
```

```
        } } System.out.println(list);
```

Status : Correct

Marks : 10/10
